Effect of two educational methods- educational software and booklet- on knowledge, attitude and performance of adolescent girls regarding puberty hygiene: a randomized controlled trial.

Protocol summary

Summary

Objectives: This study aims to determine the effect of two educational methods- educational software and booklet- on knowledge, attitude and performance of adolescent girls regarding puberty hygiene. Design: Randomized Controlled Trial. Setting and conduct: This study will be conducted on 600 secondary schools students in Tabriz city. Multistage cluster sampling will be used for sampling. In first stage, 24 schools will be randomly selected from girls' state and non state secondary schools which have at least 100 students. Then, from each school, 25 students (from second and third grades) will be randomly selected. After acquiring informed consent from students and your parents, pre-test questionnaires will be completed by participants. Then, according to the similarity of the performance score of pre-test, 24 schools will be divided into 8 groups which contain 3 schools in each group. These 3 schools in each group will be randomly assigned to two intervention groups and one control group. The two intervention groups will receive educational software or booklet, respectively. The control group will receive no intervention. One month after education, post-test questionnaires will be completed by students. Participants: Adolescent girls between 11 to 13 years old who studying in Secondary Schools and experiencing menstruation. Main outcome measures: Knowledge, attitude and performance that will be measured before and one month after education by questionnaire.
