A comparison between muscle energy technique with low-level laser in reducing neck and shoulder pain and disability in subjects with trapezius and levator scapula myofascial trigger points

Protocol summary

Summary

This study aimed to compare the effects of muscle energy technique with low-level laser on reducing neck and shoulder pain and disability in patients with myofascial trigger points in upper trapezius and levator scapula.This double- blind randomized controlled trial was performed in Zahedan University of Medical Sciences, in 2009. Thirty patients with trigger points in upper trapezius and levator scapula were participated through simple non probability sampling. Patients were randomly assigned to one of three groups, 10 in each group: including muscle energy technique, low-level laser, and placebo groups. In laser group, a low-level Ga-As laser was applied with 5 KHz frequency, a 100 mW point probe (average power), wavelength 905 nm, pulse duration 200 ns, 6 J/cm2 dosages per minute, for 3 minutes duration. In muscle energy group, we used stretching after post_ isometric relaxation. Placebo group treated using low-level laser without output. A 10 session treatment program, during two weeks, five sessions per week was performed for all groups. Before and after intervention, we assessed neck disability with Neck Disability Index, neck pain with Visual Analogue Scale and shoulder pain and disability with Shoulder Pain and Disability Index and cervical ranges of motion with specific neck goniometer.

Scientific title

A comparison between muscle energy technique with low-level laser in reducing neck and shoulder pain and disability in subjects with trapezius and levator scapula myofascial trigger points

Public title

A comparison between muscle energy technique with low-level laser in reducing neck and shoulder pain and

disability in subjects with trapezius and levator scapula myofascial trigger points

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria: Age between 18-25, having trigger point in trapezius and levator scapula muscles with main complaint: muscle pain without neurological sign, no history of respiratory diseases, surgery, and neck & thoracic spine structural disorders. Exclusion criteria: no completion of the treatment, using other therapeutic modalities during study, trauma and surgery during the study.

Age
From **18 years** old to **25 years** old

Gender
Both

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **30**

Randomization (investigator's opinion)

Health conditions studied

1

Description of health condition studied
subjects with trigger points in upper trapezius and levator scapula

ICD-10 code
M62

ICD-10 code description
Other soft tissue disorders

Primary outcomes

1

Description
Neck pain

Timepoint
Before intervention, 2 weeks after intervention

Method of measurement
Visual Analogue Scale

2

Description
Neck disability

Timepoint
Before intervention, 2 weeks after intervention

Method of measurement
Neck Disability Index

3

Description
Shoulder pain and disability

Timepoint
Before intervention, 2 weeks after intervention

Method of measurement
Shoulder Pain and Disability Index

4

Description
Cervical ranges of motion

Timepoint
Before intervention, 2 weeks after intervention

Method of measurement
Specific neck goniometer

Secondary outcomes

1

Description
No secondary outcome

Timepoint
No secondary outcome

Method of measurement
No secondary outcome

Intervention groups

1

Description
A low-level Ga-As laser was applied with 5 KHz frequency, a 100 mW point probe (average power), wavelength 905 nm, pulse duration 200 ns, 6 J/cm2 dosages per minute, for 3 minutes duration
Category
Rehabilitation

2

Description
Muscle energy technique: stretching after post_ isometric relaxation.
Category
Rehabilitation

3

Description
low-level laser without output
Category
Rehabilitation
