Clinical Trial Protocol
Iranian Registry of Clinical Trials

09 Nov 2026

comparing the effect of direct and indirect education of parents of children with ADHD on their attitudes about medication, treatment satisfaction, and medication compliance

Protocol summary

Summary

regarding the importance of medication treatment in ADHD and negative attitudes in community about these medications, this clinical trial study is performed to compare the effect of two methods of group attendance and nonattendance education on changing parent attitudes about medication, treatment satisfaction, and medication compliance.60 parents of parents of children with ADHD attending child psychiatry clinic in shahrekord are randomly assigned to group education or education with a booklet and compared before and one month after the education.
