Clinical Trial Protocol
Iranian Registry of Clinical Trials

08 Nov 2026

Comparison of the efficacy of clomiphene citrate and letrozole in patients undergoing intra uterine semen injection on the pregnancy rate.

Protocol summary

Summary

The aim of this study is to compare the efficacy of two drugs, Letrozole and Clomiphene Citrate(CC) combined with gonadotropins for ovarian stimulation in women candidate of IUI.160 patients enrolled in this study. Inclusion criteria include of patients candidate of IUI(ovulatory factor; male factor infertility;patients with cervical factor; endometriosis and idiopathic infertility); normal ;pelvic USG and bilateral tubal patency and Exclusion Criteria include of patients with age more than 35; FSH more than 10 on day 3 of menstruation cycle; uterine and adnexal pathology; ovarian cyst on USG; impaired hepatic /renal function; Diabetes mellitus; history of hypersensitivity to the study drug or to its excipients; bilateral tubal obstruction on HSG. Patients randomized to two groups: group A(n=80) (receive Letrozole - gonadotropin) and group B(n=80) (Clomiphene Citrate (CC)-gonadotropin). Group A received 5 mg Letrozole for 5 days from day 3 to 7 of menstrual cycle. In group B Clomiphene Citrate 100 mg was given for 5 days starting from day 3 of menstrual cycle. In addition, in both groups was administered 150 IU human menopausal gonadotropin (hMG)every day, starting on day 8 until human chorionic gonadotropin (hCG) administration. Ovulation was triggered with urinary HCG, when the leading follicle(s) reached 18 mm in diameter. A single IUI was performed 36-40 hours later. The Ovarian stimulation response (E2 levels and number of follicles, clinical pregnancy and endometrial thickness) was outcome.

Scientific title

Comparison of the efficacy of clomiphene citrate and letrozole in patients undergoing intra uterine semen injection on the pregnancy rate.

Public title

Clomiphene citrate vs letrozole in patients undergoing intra uterine semen injection

Purpose
Treatment
Inclusion/Exclusion criteria
Inclusion criteria: patients candidate of IUI(ovulatory factor; male factor infertility; patients with cervical factor; endometriosis and idiopathic infertility); Normal Pelvic USG and bilateral tubal patency. Exclusion Criteria: Age more than 35; FSH more than 10 on day 3 of menstruation cycle; Uterine and adnexal pathology e.g. leiomyoma; Ovarian cyst on USG., Impaired hepatic /renal function; Diabetes mellitus; History of hypersensitivity to the study drug or to its excipients; Bilateral tubal obstruction on HSG
Age
From **15 years** old to **35 years** old
Gender
Female

Phase
2-3
Groups that have been masked
No information
Sample size
Target sample size: **160**
Randomization (investigator's opinion)

Health conditions studied

1

Description of health condition studied
Infertility
ICD-10 code
n97
ICD-10 code description
Female infertility

Primary outcomes

1

Description
Pregnancy rate
Timepoint
14 days after intra uterine insemination
Method of measurement
Blood test for assay of BHCG

2

Description
Abortion rate
Timepoint
From positive test of BHCG to 20th weeks of gestation
Method of measurement
Pregnancy loss before 20th weeks of gestation determined with ultrasunogeraphy

Secondary outcomes

1

Description
Endometrial thickness
Timepoint
In the time of HCG injection
Method of measurement
Transvaginal ultrasonogeraphy

2

Description
Number of follicles
Timepoint
In the time of HCG injection
Method of measurement
Transvaginal ultrasonograghy

3

Description
Serum estradiol level
Timepoint
In the time of hCG injection
Method of measurement
Blood test(microgram/dl)

Intervention groups

1

Description
Control group (Clomiphene Citrate) : Clomiphene Citrate 100 mg was given for 5 days starting from day 3 of menstrual cycle. In addition, human menopausal gonadotropin (hMG) 150 IU was administered every day, starting on day 8 until human chorionic gonadotropin (hCG) administration. Ovulation was triggered with urinary HCG, when the leading follicle(s) reached 18 mm in diameter. A single IUI was performed 36-40 hours later.

Category
Treatment - Drugs

2

Description
Intervention group (Letrozole) : 5 mg Letrozole for 5 days from day 3 to 7 of menstrual cycle. In addition, human menopausal gonadotropin (hMG) 150 IU was administered every day, starting on day 8 until human chorionic gonadotropin (hCG) administration. Ovulation was triggered with urinary HCG, when the leading follicle(s) reached 18 mm in diameter. A single IUI was performed 36-40 hours later.

Category
Treatment - Drugs
