The effect of trigger point release of patients with tension type headache on reduction of pain and grip force and grip endurance

Protocol summary

Summary

Objective: the effect of trigger point release of patients with tension type headache on reduction of pain and grip force and grip endurance. Inclusion criteria: trigger points, nausea, vomiting and photophobia during attacks. Exclusion criteria: anti-anxiety and anti-depression drugs, upper extremity and spinal injuries during the past year, paresthesia and neurological symptoms. population and sample size: 28 patients with tension type headache(men and women). Interventions: Treatment phase starts in 6 sessions in 2 weeks. In each session one hot pack used for neck muscles for 10 min afterwards, post isometric relaxation technique used for muscles with trigger points. this technique is associated with eye movements and breathing pattern. During contraction, breathe out and look for the contraction and at rest, exhale done and look for opposite side. Contraction repeat 5-3 for each session 10 seconds. Measurement: measured grip strength and endurance before and after interventions using dynamometer. measured pain before and after interventions using Visual Analog Scale

Health conditions studied

1

Description of health condition studied
Tension type headache
ICD-10 code
G44.2
ICD-10 code description
Tension-type headache

Primary outcomes

1

Description
grip strength
Timepoint
before intervention, after intervention
Method of measurement
using dynamometer

2

Description
grip endurance
Timepoint
before intervention, after intervention
Method of measurement
using dynamometer

3

Description
pain
Timepoint
before intervention, after intervention
Method of measurement
using Visual Analog Scale(VAS)

Secondary outcomes

empty

Intervention groups

1

Description
Using a hot pack for 10 min
Category
Treatment - Other

2

Description
Post isometric relaxation technique used for muscles with trigger points. this technique is associated with eye movements and breathing pattern. During contraction, breathe out and look for the contraction and at rest, exhale done and look for opposite side.afterwards, examiner Put muscle in an elongated
Category
Treatment - Devices
