Acupressure effect on sleep quality in patients with chronic heart failure

Protocol summary

Summary

The study will conduct to investigation of acupressure effectiveness on sleep quality in patients with chronic heart failure. In this controlled clinical trail, 60 chronic heart failure patients will select from 22 bahman hospital via convenience sampling, then the subjects randomly allocate to three groups (true acupoint group, pseudo acupoint group and control group). EF has more than 20 and less than 40، absence of any lesion on the shenmen point، no history of acupressure and minimum 40 and maximum 65 years are necessary for including to the study. Unwillingness to continue participation in the study for any reason, patient was unavailable for any reason (death, discharge), drugs for 5 to 6 hours before bedtime will lead to withdrawal from the study sample. Subjects in true acupoint group will receive acupressure in hand shenmen points for three nights, placebo acupoint group will experience massage in pseudo points with about 1-1.5 cm distance near to the true points and will not do any intervention in control group. Intervention will be take place in heart unit by a trained practitioner (Project Officer). Pre and post test for measurement of sleep with Sleep Quality Index SMHSQ.

Scientific title

Acupressure effect on sleep quality in patients with chronic heart failure

Public title

Acupressure effect on sleep quality in patients with chronic heart failure

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria:Patients with systolic heart failure and left ventricular ejection fraction (Ef) is greater than 20 and less than 40%؛ In the absence of any injury at the shenmen point؛ No history of acupressure ؛ Having awareness؛ listening and speaking abilities at an acceptable level to accountability؛ Minimum 40 and maximum 65 years Exclusion criteria:Unwillingness to continue participation in the study؛ Out of reach of the

patient(Death،discharge)؛ Get opium for 5 to 6 hours before bedtime؛ Use sedative drugs

Health conditions studied

1

Description of health condition studied
Sleep

ICD-10 code
F51.2

ICD-10 code description
Nonorganic disorder of the sleep-wake schedule

Primary outcomes

1

Description
sleep quality

Timepoint
Before the intervention- First to fourth day of hospitalization

Method of measurement
SMHSQ Sleep Quality Questionnaire

Secondary outcomes

empty

Intervention groups

1

Description
The third group (control group), a group that receives the usual routine procedures.These sleep quality with SMHSQ questionnaire at the time of admission (for the study of sleep in the house), on the morning of the second, third, fourth and fifth admitted between the hours of 7 to 8 am will be reviewed by the project partners.
