Clinical Trial Protocol
Iranian Registry of Clinical Trials

07 Nov 2026

Effect of 6 weeks aerobic ergometer and royal jelly on total antioxidant capacity and glutathione peroxidase in multiple sclerosis patients

Protocol summary

Study aim
The purpose of this study is to investigate the effect of 6 weeks of aerobic training and royal jelly consumption on total antioxidant capacity and glutathione peroxidase in patients with multiple sclerosis.

Design
A clinical trial with the control group, parallel, single-blind, randomized, with a predicted sample size of 60 and Phase 3 trial

Settings and conduct
This study will be performed on multiple sclerosis patients living in Zahedan, Iran. The duration of the research is 6 weeks and the participants are divided into four groups randomly. Single-blind blindness will be performed in order to avoid the bias of the subjects and the researcher and the impact on the research results. Two interventional factors including exercise and Royal jelly are considered for this study.

Participants/Inclusion and exclusion criteria
Inclusion criteria: Multiple sclerosis patients: Expanded Disability Status Scale (EDSS) between 0-4 No supplement No cardiovascular disease Exclusion criteria: Non- multiple sclerosis Patients Multiple sclerosis patients: EDSS more than 4 Use of pharmaceutical supplements Cardiovascular disease

Intervention groups
First intervention group: Exercise and Royal jelly; Aerobic exercise and Royal jelly have been selected as interventionists of this group. Second intervention group: Exercise and placebo; Aerobic exercise has been selected as the intervention of this group. Of course, the placebo will also be used. Third intervention group: Royal jelly. In this group, Royal jelly is an intervention agent. Control group: Placebo; The placebo will be used in the control group.

Main outcome variables
Study of total antioxidant capacity changes; Study of Glutathione Peroxidase Changes

Scientific title
Effect of 6 weeks aerobic ergometer and royal jelly on total antioxidant capacity and glutathione peroxidase in multiple sclerosis patients

Public title
The effect of exercise and royal jelly on total antioxidant capacity and glutathione peroxidase in multiple sclerosis patients

Purpose
Supportive

Inclusion/Exclusion criteria

Inclusion criteria:
Multiple sclerosis patients: Expanded Disability Status Scale (EDSS) between 0-4 No use of any supplement Lack of cardiovascular disease

Exclusion criteria:
Non-MS Patients Multiple sclerosis patients: EDSS more than 4 Use of pharmaceutical supplements With cardiovascular disease

Age
No age limit

Gender
Both

Phase
3

Groups that have been masked

- Participant

Sample size
Target sample size: **60**

Randomization (investigator's opinion)
Randomized

Randomization description
Randomization method: Simple Random unit: Individual Randomization Tool: Sealed Envelope

Blinding (investigator's opinion)
Single blinded

Blinding description
Participants: The first and second intervention groups will have joint physical activity, but they will not be aware of the royal jelly and placebo in the study. The third intervention group and the control group will not be aware of the royal jelly and placebo in the study.

Placebo
Used

Assignment
Parallel

Health conditions studied

1

Description of health condition studied
Multiple sclerosis

ICD-10 code
G35

ICD-10 code description
Multiple sclerosis

Primary outcomes

1

Description
Total antioxidant capacity changes

Timepoint
Blood sampling at the beginning of the study (24 hours before the intervention) and 24 hours after the last session of the research protocol

Method of measurement
"Total antioxidant capacity" test kit

2

Description
Glutathione peroxidase Changes

Timepoint
Blood sampling at the beginning of the study (24 hours before the intervention) and 24 hours after the last session of the research protocol

Method of measurement
"Glutathione peroxidase" test kit

Secondary outcomes

empty

Intervention groups

1

Description
First intervention group: Exercise and Royal jelly Name of the used substance: Royal Jelly Capsule Chemical composition and concentration: Each capsule contains 1000 mg of Natural Royal Jelly in a base of Soya Oil and

Soya Lecithin. Dosage: 1 capsule contains 1000 mg Usage frequency: 1 capsule every morning Duration of use: 42 days (6 weeks) Consumption instruction: Oral

Category

Treatment - Other

2

Description

Second intervention group: Exercise and placebo Name of the used substance: Placebo Usage frequency: 1 capsule every morning Duration of use: 42 days (6 weeks) Consumption instruction: Oral

Category

Treatment - Other

3

Description

Third intervention group: Royal jelly Name of the used substance: Royal Jelly Capsule Chemical composition and its concentration: Each capsule contains 1000 mg of Natural Royal Jelly in a base of Soya Oil and Soya Lecithin. Dosage: 1 capsule contains 1000 mg Usage frequency: 1 capsule every morning Duration of use: 42 days (6 weeks) Consumption instruction: Oral
