Evaluating of Anti-dry cream vs Flucinolone acetonide 0/o25% cream in treatment of hand eczema

Protocol summary

Summary

Major objectives: Effect of Anti-dry cream (contains essences of Lavender, Geranium, and Aloe vera) on improving manifestations of hand eczema in comparison with Fluocinolone acetonide 0.025% cream. Design: Randomized controlled double-blinded study. Setting and conduct: 108 eligible patients with hand eczema attending to dermatologic clinic will be enrolled in this study after filling consent form and randomized into two groups (control and intervention group). Inclusion criteria: Patients with hand eczema that is confirmed by dermatologist; age between 18-75 y/o; patients should be eager to participate in trial. Exclusion criteria: Pregnancy and lactation; application of topical drugs during previous two weeks; systemic therapies such as corticosteroids, and antibiotics during the past 4 weeks; localized hand infection; history of allergic reaction to the study medications. Intervention: Anti-dry cream and Fluocinolone acetonide 0.025% will be prepared in the identical tubes which only labeled by numbers. Participants will apply maximally one gram of medications topically on eczematous lesions twice a day for a period of two weeks; the amount of applied creams is estimated by Finger Tip Unit (FTU). Main outcome: Patients will be assessed at 2 determined time points: at first attending session and two weeks after initiating treatment. A Questionnaire (contains of clinical signs and symptoms: erythema, scaling, lichenification/ hyperkeratosis, edema,vesicle, fissure, pruritus and pain) will be filled out by dermatologist in the days of 0 and 14. The Hand Eczema Severity Index will be used to assess the extent, severity and improvement of the disease during each session.

Health conditions studied

1

Description of health condition studied
Hand eczema
ICD-10 code
ICD-10: L3
ICD-10 code description
ICD-10: Dermatitis unspecified Eczema NOS

Primary outcomes

1

Description
Change of signs and symptoms of hand eczema
Timepoint
The days of 0 and 14
Method of measurement
Questionnaire (contains of clinical signs and symptoms: erythema, scaling, lichenification/ hyperkeratosis, edema,vesicle, fissure, pruritus and pain)

Secondary outcomes

1

Description
Side effects of drugs
Timepoint
14 days after prescription of drug
Method of measurement
Change of pruritus, erythema and scaling, bullae

Intervention groups

1

Description
Intervention group: Anti dry® cream (contains Aleo vera essence, Geranium essence, Lavander essence, respectively, with ratio of 50:1:15 in vanishing cream), 1FTU (finger tip unit= 0.5g) for 10×10 cm2, twice daily, for two weeks.
Category
Treatment - Drugs

2

Description
control group: fluocinolon acetonide cream 0.025%, twice daily, for two weeks
Category
Treatment - Drugs
