Clinical Trial Protocol
Iranian Registry of Clinical Trials

07 Nov 2026

Evaluation of the effect of herbal oral product (thyme syrup) in patients with COVID-19

Protocol summary

Study aim
Evaluation of the effect of herbal oral product (thyme syrup) in patients with COVID-19

Design
152 patients between the ages of 30 and 65 with a probable diagnosis of COVID-19 according to the national protocol, after applying the inclusion and exclusion criteria of the study and completing the conscious consent form with block randomization are placed in one of the intervention and control groups.

Settings and conduct
This study is a type of clinical trial that is not blind and patients who refer to Imam Khomeini Hospital in Sari are diagnosed with COVID-19 manifestation will entered. Then, 152 patients between the ages of 30 and 65 with a probable diagnosis of COVID-19 according to the national protocol, after applying the inclusion and exclusion criteria of the study and completing the conscious consent form with block randomization are placed in one of the intervention and control groups.

Participants/Inclusion and exclusion criteria
Patients between 30 and 65 years with Probable diagnosis of COVID-19 based on national Iranian protocol

Intervention groups
Intervention group: Corona standard treatment + herbal syrup (Iranian medicine product made by the research team): 100 cc of the syrup is mixed with 100 cc of hot water and eaten 30 minutes after a meal (three times a day). Control group: Corona standard treatment according to the national protocol of the Ministry of Health of Iran.

Main outcome variables
Blood oxygen saturation, shortness of breath, length of hospital stay

Scientific title
Evaluation of the effect of herbal oral product (thyme syrup) in patients with COVID-19

Public title
The effect of herbal syrup on patients with corona
Purpose
Treatment
Inclusion/Exclusion criteria
Inclusion criteria:
Probable diagnosis of COVID-19 based on national Iranian protocol
Exclusion criteria:
Late 5 days from the onset of symptoms Existence of comorbidity Pregnancy and lactation history of Allergy Complicated with bacterial infection
Age
From **30 years** old to **65 years** old
Gender
Both

Phase
3
Groups that have been masked
No information
Sample size
Target sample size: **152**
Randomization (investigator's opinion)
Randomized
Randomization description
Before intervention, each patient selects one of the 152 envelopes that contain the codes 0001 to 0152, then by having the selected code and using the output table of Block randomization statistical software, it is determined the patient in which group: intervention or controls.
Blinding (investigator's opinion)
Not blinded
Blinding description
Placebo
Not used
Assignment
Parallel

Health conditions studied

1

Description of health condition studied
ARDS
ICD-10 code
J80
ICD-10 code description
Acute respiratory distress syndrome

Primary outcomes

1

Description
Blood oxygen saturation level
Timepoint
0,1,2,3,5,7 days after intervention
Method of measurement
Pulse oximetry

Secondary outcomes

1

Description
degree of dyspnea
Timepoint
0,1,2,3,5,7 days after intervention
Method of measurement
Likert,s scale

2

Description
Duration of hospital stay
Timepoint
7days after intervention
Method of measurement
day

Intervention groups

1

Description
Intervention group: standard treatment of COVID-19 + herbal syrup (Iranian medicine product made by the research team): 100 cc of the syrup is mixed with 100 cc of hot water and eaten 30 minutes after a meal (three times a day).
Category
Treatment - Drugs

2

Description
Control group: standard treatment of COVID-19(Kaletra+

Azitromycine)

Category
Placebo
