Clinical Trial Protocol
Iranian Registry of Clinical Trials

08 Nov 2026

The effect of cupping (Persian Method) on clinical manifestations of patients with COVID-19

Protocol summary

Study aim
The effect of cupping (Persian Method) on clinical manifestations of patients with COVID-19

Design
Clinical trial with control group, with parallel groups, not blind, randomized, phase 2 on 68 patients. 68 packets containing codes 0001 to 0068 were used for randomization. Then, by selecting one and having the selected code and using the output table of Block randomization statistical software, it is determined which group the patient is in the intervention or control group.

Settings and conduct
Patients referring to "Imam Khomeini" Hospital in Sari, "Pakdasht Martyrs" Hospital in Tehran and "Ayatollah Khansari" Hospital in Arak will enter the study at the discretion of Corona. Then, 68 patients between the ages of 18 and 75 with a probable diagnosis of COVID-19 based on national protocol, after applying the inclusion and exclusion criteria of the study and completing the conscious consent form with random blockade are placed in one of the intervention and control groups.

Participants/Inclusion and exclusion criteria
inclusion criteria: Patients between 18 and 75 years of age with a probable diagnosis of COVID-19 based on the protocol of Iran exclusion criteria: comorbidity, pregnancy and lactation, history of allergies and any skin lesions in the area.

Intervention groups
Intervention group: The standard treatment for COVID-19 + hot cupping is 4 cm (T4) on each side of the vertebrae, 4 cm from the spinus process (for 5 minutes with a medium glass with a mouth diameter of 7 cm and a height of 7-9 cm). So that the suction rate is between 10 and 15 mm.); Three times a day for 7 days. control group: Standard treatment of COVID-19 according to the protocol of the Ministry of Health of Iran

Main outcome variables
Blood oxygen saturation, shortness of breath, length of hospital stay

Scientific title

The effect of cupping (Persian Method) on clinical manifestations of patients with COVID-19

Public title
The effect of hot cupping on corona symptoms
Purpose
Supportive
Inclusion/Exclusion criteria
Inclusion criteria:
Probable diagnosis of COVID-19 based on national Iranian protocol
Exclusion criteria:
Existence of comorbidity Pregnancy and lactation history of Allergy There is any skin lesion in the area
Age
From **18 years** old to **75 years** old
Gender
Both

Phase
N/A
Groups that have been masked
No information
Sample size
Target sample size: **68**
Randomization (investigator's opinion)
Randomized
Randomization description
Before intervention, each patient selects one of the 68 envelopes that contain the codes 001 to 068, then by having the selected code and using the output table of Block randomization statistical software, it is determined the patient in which group: intervention or controls.
Blinding (investigator's opinion)
Not blinded
Blinding description
Placebo
Not used
Assignment
Parallel

Health conditions studied

1

Description of health condition studied
COVID-19
ICD-10 code
U07.1
ICD-10 code description
COVID-19

Primary outcomes

1

Description
Blood oxygen saturation level
Timepoint
0,1,2,3,5,7 days after intervention
Method of measurement
Pulse oximetry

Secondary outcomes

1

Description
degree of dyspnea
Timepoint
0,1,2,3,5,7 days after intervention
Method of measurement
Likert,s scale

2

Description
Duration of hospital stay
Timepoint
7days after intervention
Method of measurement
day

Intervention groups

1

Description
Intervention group: The standard treatment for COVID-19 (Azithromycin daily + Kaletra *2 BD) + hot cupping is 4 cm (T4) on each side of the vertebrae, 4 cm from the spinus process (for 5 minutes with a medium glass with a mouth diameter of 7 cm and a height of 7-9 cm). So that the suction rate is between 10 and 15 mm.); Three times a day for 7 days.
Category
Treatment - Other

2

Description
Control group: Control group: Corona standard treatment based on the protocol of the Ministry of Health of Iran (Azithromycin daily + Kaletra *2 BD).
Category
Treatment - Drugs
