Comparative evaluation of the effect of aromatherapy with the essential oils of lavender and peppermint on cardiac patients' sleep quality

Protocol summary

Study aim

To determine the effect of aromatherapy with essential oils of lavender and peppermint on the sleep quality of cardiac patients

Design

Clinical trials, with parallel groups, randomized

Settings and conduct

In this study, heart patients hospitalized in Imam Ali Hospital and eligible individuals were randomly divided into three groups (two intervention groups and one control group). For 7 nights at 22 o'clock, in group one, three drops of peppermint essential oil, in group two, three drops of lavender essential oil, and in group three (control group), three drops of distilled water, on a napkin, and held for 20 minutes by the gauze, Will be attached in the chest area.

Participants/Inclusion and exclusion criteria

Inclusion criteria include Consent to participate in the study, positive reaction to smell, earn points equal to or more than five from the Pittsburgh sleep quality Index. Exclusion criteria include Unwillingness to continue to cooperate, and administering oxygen for patients.

Intervention groups

In group1, for seven nights at 22 o'clock, the three drops of Peppermint essential oil will be used. Essential oils will be dropped by the dropper on napkins and is connected to the patient's clothing at the chest and inhaled for 20 minutes. In group2: for seven nights at 22 o'clock, the three drops of lavender essential oil will be used. Essential oils will be dropped by the dropper on napkins and is connected to the patient's clothing at the chest and inhaled for 20 minutes. In control group: for seven nights at 22 o'clock, the three drops of distilled water and is connected to the patient's clothing at the chest and inhaled for 20 minutes

Main outcome variables

sleep quality

Scientific title

Comparative evaluation of the effect of aromatherapy with the essential oils of lavender and peppermint on cardiac patients' sleep quality

Public title

Comparative evaluation of the effect of aromatherapy with the essential oils of lavender and peppermint on cardiac patients' sleep quality

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Consent to participate in the study
Positive reaction to smell
Stability of vital signs (blood pressure, pulse, respiration and temperature) having aged 18 to 65 years
Earn points equal to or more than five from the Pittsburgh sleep quality Index
Lack of sinusitis and Pneumonia
No addiction to drugs and alcohol
Being alert
Passed 48 hours of admission not having mental disease and no history of hospitalization in psychiatric wards
Do not take caffeine one hour before bedtime

Exclusion criteria:

Unwillingness to continue to cooperate
Transition to other wards or death
Receiving narcotic and oxygen during aromatherapy
Critically ill patient during the study

Age

From **18 years** old to **65 years** old

Gender

Both

Phase

2-3

Groups that have been masked

No information

Sample size

Target sample size: **105**

Randomization (investigator's opinion)

Randomized

Randomization description

Qualified samples were entered into the study by accessible method and randomly divided into intervention groups (peppermint and lavender) and control. Blocks were done as follows: To aromatic groups with peppermint essential oil and Lavender was assigned A and B codes respectively, and the control group received C code. The study blocks were ABC, ACB, BAC, BCA, CAB, CBA, BCC, CAB, CAB, and the ABC block was selected as the first block. Patients were assigned to peppermint, lavender, and control groups, respectively, and this method continued until the samples were completed.
