The effect of music on metabolic, physical and psychological response to stress after cardiac surgery in selected hospitals of Qom, 2010

Protocol summary

Summary

This study investigates the effect of music on physical, metabolic and psychological responses to stress after heart surgery. A total of 60 inpatients in open heart section participate in this study in two experimental (30 patients) and control (30 patients) groups on the first day after the surgery. All the patients will rest in the bed while receiving oxygen and head of the bed is 20-30 degrees elevated. The patients in the intervention group will listen to a light music using mp3 player through a headphone, from 14 to 14:30 pm. The patients in the control group won't receive any intervention. Blood pressure, pulse rate, respiratory rate, mean arterial pressure, oxygen saturation, serum cortisol, oxytocin, pain and anxiety levels will be measured at 14, 14:30, and 15 pm and compared between groups.
