Effect of calcium and vitamin D co-supplementation on insulin resistance and inflammatory factors in women with gestational diabetes

Protocol summary

Study aim
The aim of this study is to determine the effects of calcium and vitamin D co-supplementation on insulin resistance, inflammatory factor and biomarkers of oxidative stress in gestational diabetes.

Design
This study is a randomized double-blind placebo-controlled trial.

Settings and conduct
56 patients with GDM among pregnant women of eligible and referred to maternity clinics affiliated to Kashan University of Medical Sciences, Kashan, Iran in the study will be selected.

Participants/Inclusion and exclusion criteria
Pregnant women aged 18-40 years diagnosed with GDM at 24-28 weeks' gestation will be included in this study. Subjects with premature preterm rupture of membrane (PPROM), placenta abruption, pre-eclampsia, eclampsia, chronic hypertension, hypothyroidism, urinary tract infection, smokers and those with kidney or liver diseases or those taking estrogen therapy, those who required commencing insulin therapy during intervention and stressful life conditions will be excluded.

Intervention groups
Patients will be assigned to receive either calcium and vitamin D supplements (intervention group) or placebo (control group).

Main outcome variables
Baseline and End-of-trial fasting plasma glucose (FPG), serum insulin, insulin resistance, lipid profiles, inflammatory factors and biomarkers of oxidative stress will be measured.

Scientific title
Effect of calcium and vitamin D co-supplementation on insulin resistance and inflammatory factors in women with gestational diabetes

Public title
Effect of calcium and vitamin D in treatment of gestational diabetes
Purpose
Treatment
Inclusion/Exclusion criteria
Inclusion criteria:
Pregnant women aged 18-40 years; diagnosed with GDM at 24-28 weeks' gestation
Exclusion criteria:
Subjects with premature preterm rupture of membrane Placenta abruption Pre-eclampsia Eclampsia Chronic hypertension Hypothyroidism Urinary tract infection Smoking Those with kidney or liver diseases Those taking estrogen therapy Stressful life conditions
Age
From **18 years** old to **40 years** old
Gender
Female

Phase
2
Groups that have been masked

- Participant
- Investigator
- Outcome assessor

Sample size
Target sample size: **56**
Randomization (investigator's opinion)
Randomized
Randomization description
At study baseline, after balance randomization, subjects will be randomly divided into two groups to take either calcium and vitamin D co-supplementation (n = 28) or placebo (n = 28). Randomization will be done by the use of computer-generated random numbers.
Blinding (investigator's opinion)
Double blinded
Blinding description
Randomization and allocation will be concealed from the researchers and participants until the final analyses are completed. Another person at the maternity clinics affiliated to Kashan University of Medical Sciences, who is not involved in the trial and not aware of random sequences, will be assigned the participants to the numbered bottles of capsules.
Placebo
