Evaluation of the effectiveness of Silymarin (Silybum marianum) capsule on the clinical symptoms of outpatients with COVID-19

Protocol summary

Study aim

Determining the effectiveness of Silymarin (Silybum marianum) extract capsule in the treatment of outpatients Covid 19 and also evaluating its effects on reducing mortality or hospitalization due to (SARS-CoV-2)

Design

This is a double-blind clinical study of phases 2-3. This study will be performed on 140 patients who are divided into two groups. Randomly, a group of outpatients with Covid-19 were given a herbal supplement containing 500 mg capsules of Silymarin (Silybum marianum) extract three times a day and a group of placebo capsules for 10 days with common medications. The blocking method and randomization site "Randomaize.com" are used for randomization. Patients are followed up during this period in terms of clinical symptoms and severity of the disease and the need for hospitalization.

Settings and conduct

This study is performed in 16-h clinics of Covid-19 in Mashhad. Physician, patient, and data analyst are unaware of the medication.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Outpatients with COVID-19; Confirming RT-PCR test for SARS-CoV-2; Blood oxygen saturation more than 90%; Age 18-60 years Exclusion criteria: Pregnant women; Breastfeeding women

Intervention groups

Placebo group: Receive common therapies + herbal medicine placebo (capsule containing microcellulose starch (Avisel), which is similar to the capsule of the intervention groups and is prepared in the School of Persian and Complementary Medicine of Mashhad University of Medical Sciences) three times a day / Intervention group: Receive common treatments + 500 mg capsules of Silymarin (Silybum marianum) extract prepared in the School of Persian and Complementary Medicine, Mashhad University of Medical Sciences three times a day

Main outcome variables

The rate of recovery time from the time of randomization of patients to the improvement of clinical symptoms including fever, cough and myalgia

Scientific title

Evaluation of the effectiveness of Silymarin (Silybum marianum) capsule on the clinical symptoms of outpatients with COVID-19

Public title

Silymarin capsule in COVID-19

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Outpatients with COVID-19 Confirmed with RT-PCR SPO2 more than 90% Age between 18 to 60 years old

Exclusion criteria:

Pregnant women Breastfeeding women

Age

From **18 years** old to **60 years** old

Gender

Both

Phase

2-3

Groups that have been masked

- Participant
- Care provider
- Outcome assessor

Sample size

Target sample size: **140**

Randomization (investigator's opinion)

Randomized

Randomization description

The volume of each block will be 4. Then write a list of blocks and assign numbers to them, for example (AABB (1) - BBAA (2) - BABA (3) - BAAB (4)) which according to the sample size of 140 people, we have 35 blocks. Then, random numbers between one and 35 are selected according to the Randomaize.com randomization site, and finally, the treatment allocation list is determined based on random numbers.

Blinding (investigator's opinion)

Double blinded

Blinding description

Due to the use of a placebo similar to interventional therapy, the physician associated with the participants and participants will not be informed of the assigned treatment and also the analyst will be unaware of the treatment assigned to the two groups. Finally, after analyzing the data, the researcher who prepared the packages reveals codes A and B.
