Evaluation of safety and efficacy of repeated intrathecal and/or intravenous transplantations of Wharton’s jelly derived mesenchymal stromal cells in patients with ALS, clinical trial, phase I

Protocol summary

Study aim

Evaluation of safety and efficacy of repeated intrathecal and/or intravenous transplantations of Wharton’s jelly derived mesenchymal stromal cells in patients with ALS

Design

This study, which is a phase 1 clinical trial, includes 12 patients with ALS.

Settings and conduct

The patient was admitted to the VIP room of Mostafa Khomeini Hospital and the cell suspension prepared from Whartocell allogeneic cell bank produced in the center with good manufacturing products (GMP) grade was injected intrathecally by the neurologist in charge of the project in 6 patients and intravenously by the expert nurse in charge in 6 other patients.

Participants/Inclusion and exclusion criteria

Age: 18-70 Both gender Disease onset at least: 6 months All patients diagnosed with ALS and R/O of differential diagnosis Forced Vital Capacity (FVC) ≥40٪ ALS Functional Rating Scale-Revised (ALSFRS-R)≥ 25 Under treatment with rilozule and edaravone Ability to walk even with aid and ability to tolerate the procedures

Intervention groups

1- Intrathecal transplantations of Wharton’s jelly derived mesenchymal stromal cells 2- Intravenous transplantations of Wharton’s jelly derived mesenchymal stromal cells

Main outcome variables

1- Evaluation of possible side effects after repeated intrathecal transplantation or Intravenous allogeneic cord-derived mesenchymal cells of allogeneic cord in patients with ALS 2- Evaluation of changes in ALSFRS-R score 3- Evaluation of FVC changes 4- Evaluation of year survival

Scientific title
Evaluation of safety and efficacy of repeated intrathecal and/or intravenous transplantations of Wharton’s jelly derived mesenchymal stromal cells in patients with ALS, clinical trial, phase I

Public title
Evaluation of safety and effectiveness of recurrent umbilical cord-derived stem cell transplantation in patients with ALS

Purpose
Treatment

Inclusion/Exclusion criteria

Inclusion criteria:
Age: 18-70 Both gender Disease onset at least: 6 months All patients diagnosed with ALS and R/O of differential diagnosis FVC ≥40٪ ALSFRS-R≥ 25 Under treatment with rilozule and edaravone Ability to walk even with aid and ability to tolerate the procedures

Exclusion criteria:
Concomitant psychiatric or cognitive disease Concomitant systemic disease (uncontrolled HTN, uncontrolled DM, uncontrolled kidney diseases, HF, ...) Treatment with corticosteroid , IVIg, immunosuppressive and cytotoxic during 12 months Dependency to ventilation History of malignancy Concomitant other neurodegenerative disorders

Age
From **18 years** old to **70 years** old

Gender
Both

Phase
1

Groups that have been masked
No information

Sample size
Target sample size: **12**

Health conditions studied

1

Description of health condition studied
Amyotrophic lateral sclerosis (ALS)

ICD-10 code
G12.21

ICD-10 code description
Amyotrophic lateral sclerosis

Primary outcomes

1

Description
safety

Timepoint
Evaluation of possible side effects at intervals of 24 hours, 1 month, 3 months, 6 and 12 months after injection

Method of measurement
side effects questionnaire

Secondary outcomes

1

Description
Changes in ALSFRS-R score

Timepoint
1, 3, 6 and 12 months after transplantation

Method of measurement
ALSFRS-R questionnaire

2

Description
Changes in FVC percent (spirometery)

Timepoint
6 and 12 months after transplantation

Method of measurement
Spirometry

3

Description
One-year survival

Timepoint
one year
Method of measurement
visiting the patients

Intervention groups

1

Description
Intervention groups: Intravenous or intrathecal injection of 60 millions of Wharton's jelly derived mesenchymal stromal cells in two doses/ 3 months- WJMSCs are suspended in 10 ml N/S for intravenous and 5 ml for intrathecal transplantation. Celltech pharmed Co. provided the WJMSCs for this study.
