The effect of motion-based self-care education on self-care behavior of patients with COVID-19 in Isfahan in 2022

Protocol summary

Study aim
Determining the effect of self-care education based on motionography on the self-care behavior of patients with COVID-19

Design
The clinical trial has a control group with single blind and randomized parallel groups on 40 patients with COVID-19 and random numbers table is used for randomization.

Settings and conduct
The study was conducted in the office of Dr morteza Pourahmad(specializing in infectious diseases),during which 40 patients of COVID-19 who needed home quarantine were randomly divided into control and intervention groups,and then to the patients of the intervention group with motion graphics about nutrition.Patients during the recovery period,how to take drugs and drug and nutritional interactions,the principles of proper quarantine in a separate or shared room,use of common or separate sanitary facilities,principles of disposing of patient waste,duration of quarantine and issues related to after getting out of quarantine,tips related to the possibility of re-infection with the COVID-19 disease,time of corona vaccine injection,signs and symptoms of worsening of the disease,respiratory physiotherapy and psychological issues related to the quarantine period,were given and the patients of the control group were given oral training.And it is given by the attending physician.Data collection is done before and after the intervention.

Participants/Inclusion and exclusion criteria
Age between 20-65;Suffering from cancer diseases,history of organ transplant surgeries and using drugs that weaken the immune system

Intervention groups
The intervention group included patients with COVID-19 who will benefit from self-care training at home using motion graphics,and the control group included patients with covid-19 who will benefit from orally by their physician.

Main outcome variables
Improving the self-care behavior of patients with COVID-19 in home quarantine.

Scientific title
The effect of motion-based self-care education on self-care behavior of patients with COVID-19 in Isfahan in 2022

Public title
The effect of motion-based self-care education on self-care behavior of patients with COVID-19
Purpose
Education/Guidance
Inclusion/Exclusion criteria
Inclusion criteria:
All patients have full consent to participate in the study. Patients only need home quarantine. The patients of the intervention group should have mobile phones with the ability to run motion graphics. Intervention group patients should have good hearing. Patients should be in the age range of 20-65 years.
Exclusion criteria:
Suffering from cancer diseases History of organ transplant surgeries Using drugs that weaken the immune system
Age
From **20 years** old to **65 years** old
Gender
Both

Phase

Groups that have been masked

- Data analyser

Sample size
Target sample size: **40**
Randomization (investigator's opinion)
Randomized
Randomization description
Simple randomization will be done using permutation block in such a way that intervention group patients will be given code A and control group patients will be given code B, and then the blocks will be determined by lottery and for example If the first block is AB, it means that the first patient who meets the study entry criteria will be in the intervention group and the second patient who meets the study entry criteria will be in the control group, and we will have twenty blocks in total.
Blinding (investigator's opinion)
Single blinded
Blinding description
In this project, the data analyst will not be aware of which patients are in the intervention group and which are in the control group.
Placebo
Not used
Assignment
Parallel

Health conditions studied

1

Description of health condition studied
COVID-19
ICD-10 code
ICD-10 code description

Primary outcomes

1

Description
The power score of self-care behavior of COVID-19 at home in the researcher-made questionnaire of self-care behavior of COVID-19 at home
Timepoint
The measurement of the ability to self-care for COVID-19 at home at the beginning of the study (before the intervention) and 14 days after receiving self-care training at home
Method of measurement
Questionnaire of self-care behavior of COVID-19 at home

Secondary outcomes

empty

Intervention groups

1

Description
Intervention group: Receiving self-care education motion graphics (in the areas of feeding patients during the recovery period, how to take drugs and drug and

nutritional interactions, principles of appropriate quarantine in a separate room or a shared room, using a shared toilet and bathroom with other family members or Separately, the principles of disposing of patient waste, the duration of quarantine and issues related to after leaving quarantine, points related to the possibility of re-infection with COVID-19, the time of corona vaccine injection, signs and symptoms of worsening of the disease, respiratory physiotherapy and psychological issues. Related to the quarantine period and topics related to fasting in the holy month of Ramadan in patients with COVID-19).
